Why to choose Glass Line Coating ?

Glass Line Coating is one of the most advanced technology in Solar Water Heater manufacturing. The special Glass is coated and furnace at a high temperature of 850°C.

This coating suits any type of hard water and keeps it free from rust and corrosion. Glass coating is a good insulator of heat, hence the water remains hotter for a longer duration. The tank is like a capsule hence the dish end shape can withstand high pressure.

Glass coated tank is more hygienic since it does not allow any particles to stick or react on the inner surface of tank and the special manhole provided helps in keeping the tank clean and hygienic.

Salient Features

- Suits to any Hardness water up to 3000 PPM.
- Technologically advanced Storage Tank with GLASS LINE coating.
- High efficient PUF insulation.
- High quality ETC Tubes used in the system which can generate high temperature of hot water between 70-90°C on clear sunny days.
- High Quality Solar Selective Coating Facilities excellent heat absorption and minimal heat loss.
- Support Structure made out of G.I. sheet with Polyester based powder coating.
